PNO160
PNO160
ribosomal protein S16 - fungus (Fusarium sporotrichioides) (fragment)
C;Species: Fusarium sporotrichioides
C;Date: 05-Aug-1994 #sequence_revision 05-Aug-1994 #text_change 11-Nov-1994
C;Accession: PNO160
R;Fukaya, N; Chow, L.P.; Sugiura, Y.; Tsugita, A.; Ueno, Y.; Tabuchi, K.
submitted to JIPID, May 1994
A;Description: Two dimensional polyacrylamide gel electrophoresis of Fusarium sporotrich A;Reference number: PNO160
A;Accession: PNO160
A;Accession: PNO160
A;Residues: 1-12 <FUK>
C;Keywords: protein biosynthesis; ribosome

"Urotensin II: a somatostatin-like peptide in the caudal
neurosecretory system of fishes.";
Proc. Natl. Acad. Sci. U.S.A. 77:5021-5024(1980).
-i- FUNCTION: UROTENSIN IS FOUND IN THE TELEOST CAUDAL NEUROSECRETORY
SYSTEM. IT HAS A SUGGESTED ROLE IN OSMOREGULATION AND AS A
CORTICOTROPIN-RELEASING FACTOR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   21-JUL-1986 (Rel. 01, Created)

Smith R.L., Banks J.L., Snavely M.D., Maguire M.E.;

"Sequence and topology of the Cora magnesium transport systems of salmoncila typhimurium and Escherichia coli. Identification of a new class of transport protein,";

J. Biol. Chem. 268:14071-14080(1993).

J. BIOCTION: HAS BOTH ATPASE AND HELICASE ACTIVITIES. UNWINDS DNA DUPLEXES WITH 3' TO 5' POLARITY WITH RESPECT TO THE BOUND STRAND AND INITIATES UNWINDING MOST EFFECTIVELY WHEN A SINGLE-STRANDED REGION IS PRESENT. INVOLVED IN THE POSTINCISION EVENTS OF NUCLEOTIDE EXCISION REPAIR AND METHYL-DIRECTED MISMATCH REPAIR.

-1- SIMILARITY: BELONGS TO THE UVRD SUBFAMILY OF HELICASES.
